# EU-Wide Interoperable Mobility Payment Services

**Guido Di Pasquale, PluService**  
**Tamás Roósz, NMP Plc.**

# Current scenario

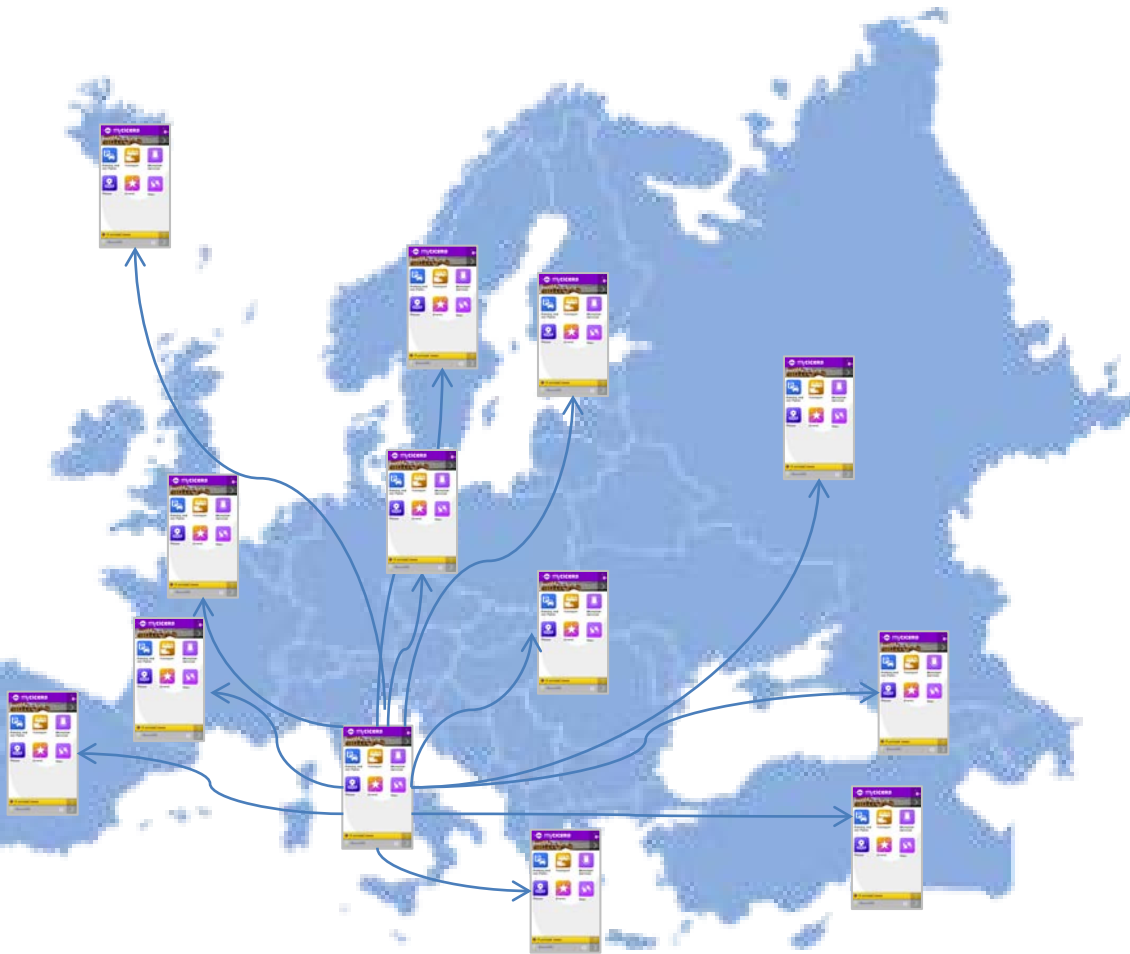

Accessing and paying Mobility services via mobile Apps is getting more and more popular.

- Almost all apps have a national/local scope
- No interoperability - each app is a “closed system”
- Customers have to register on different platforms (credentials and payment methods)

# Customer needs

What if a traveler wants to continue to use her/his home App across Europe for paying mobility services (e.g. on-street and off-street parking)?

# MOBiNET

## Key Components

- Service Directory
- Identity Manager
- Billing
- MOBiAgent
- Telematics Service Provider Manager
- Dashboard

@MOBiNET\_EU

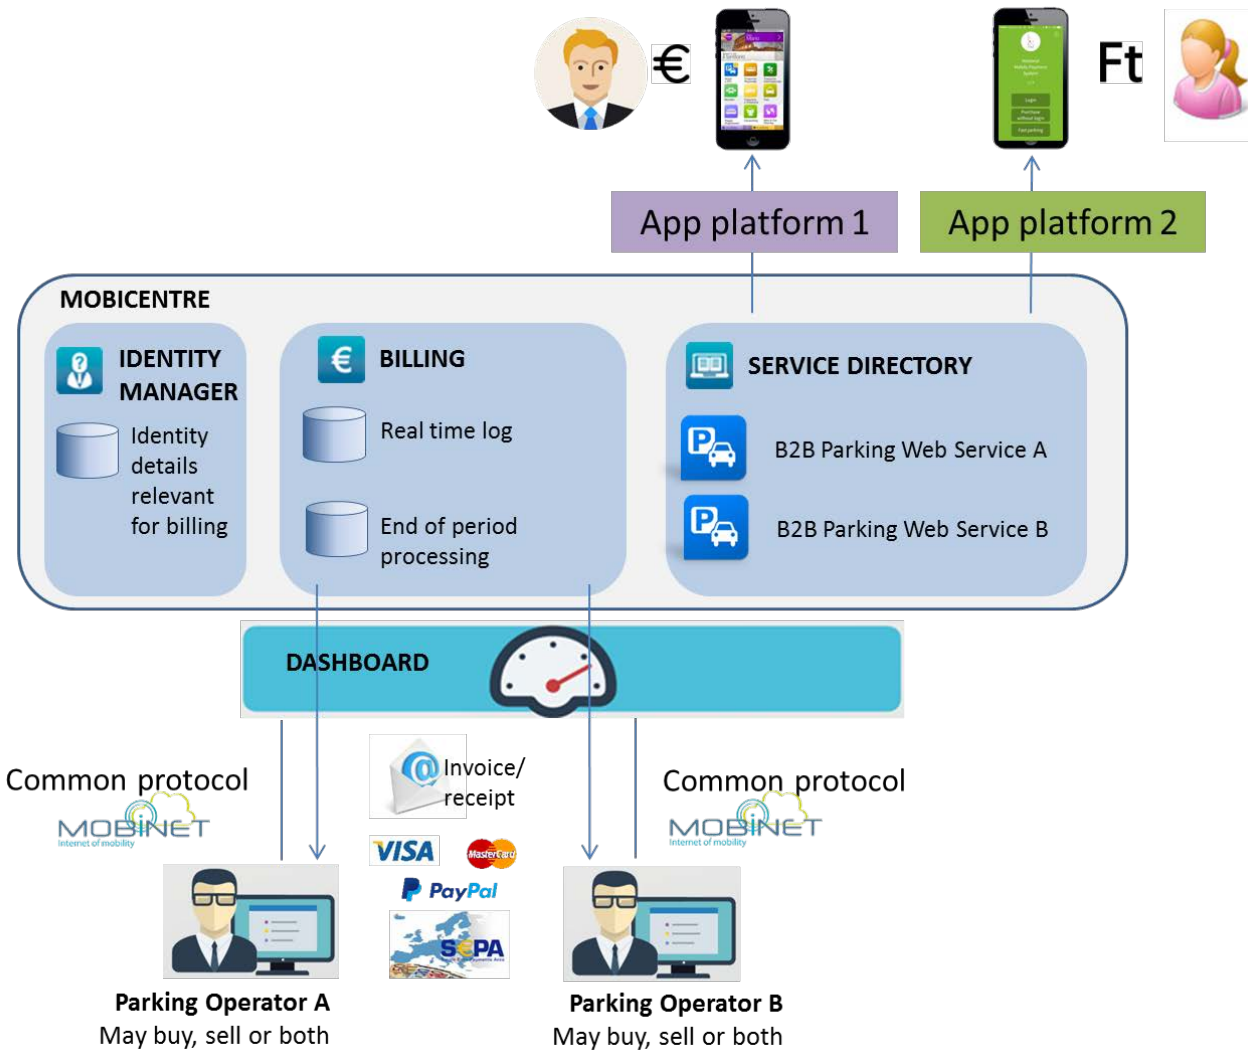

Group MOBiNET "the Internet of (Transport and) Mobility"

[www.mobinet.eu](http://www.mobinet.eu)

# B2B2C Parking Payment Use Case

- Sharing parameters: parking zones, fare parameters, etc.
- Prepaid parking services
- On line operations: start, stop, extend
- Reporting
- Billing data for commissions

# B2B2C Parking Payment Use Case

MOBiNET enables:

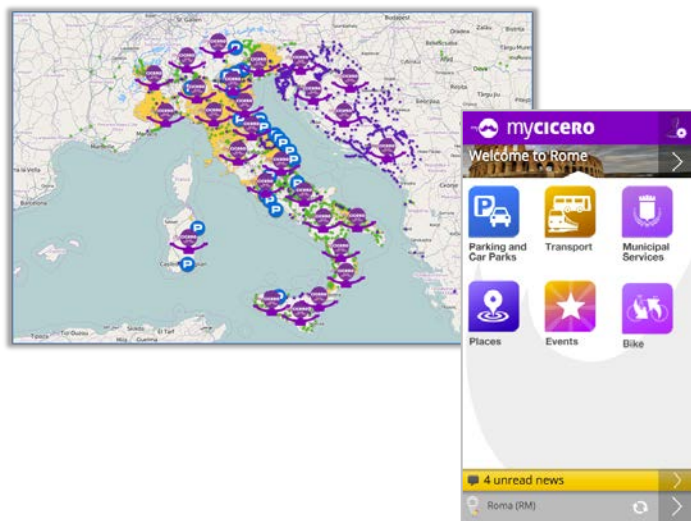

- the creation of a network of EU parking apps
- seamless user experience in EU in terms of:
  - using the same app for accessing all parking services within the network
  - parking abroad without creating a new account in a new system
  - paying with usual methods (same eWallet, credit card, etc)
  - having a unique history of transactions and a unique billing system, regardless of the Country where parking took place.

# Concrete business case

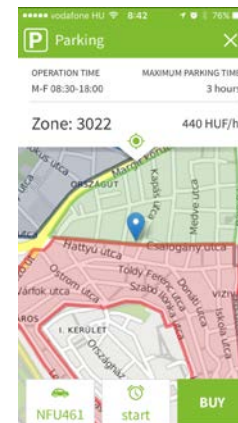

myCicero App, available in Italy and covers 40 cities

NMP App, available in Hungary and covers 74 cities

Italy

Service  
payment  
roaming

Hungary
